

Gravity Fed Box Cutter

GRA-BC™

At Haden & Custance we are constantly developing ways to make your value chain operate better, safer and faster.

**Looking to simplify your carton opening process?
Concerned with staff safety?**

Haden & Custance has developed the gravity fed box cutter to safely and efficiently cut the carton ready for removal by an operator. It utilises H&C proven de-cartoning technology to create a unit so simple and portable there is no operator training necessary. Just plug in an air supply and go. The portability means it can be moved around to different areas, as and when required providing an overall cost effective solution.

Operation

The unit is manually fed via a gravity infeed conveyor and uses pneumatic logic to pass the carton through the cutting mechanism. A gravity outfeed conveyor feeds the cut carton out onto a 'rotation assist' section for manual carton removal and palletisation.

Optional extra equipment could include a lift assist and/or vacuum lift to completely remove the need to manually lift the blocks.

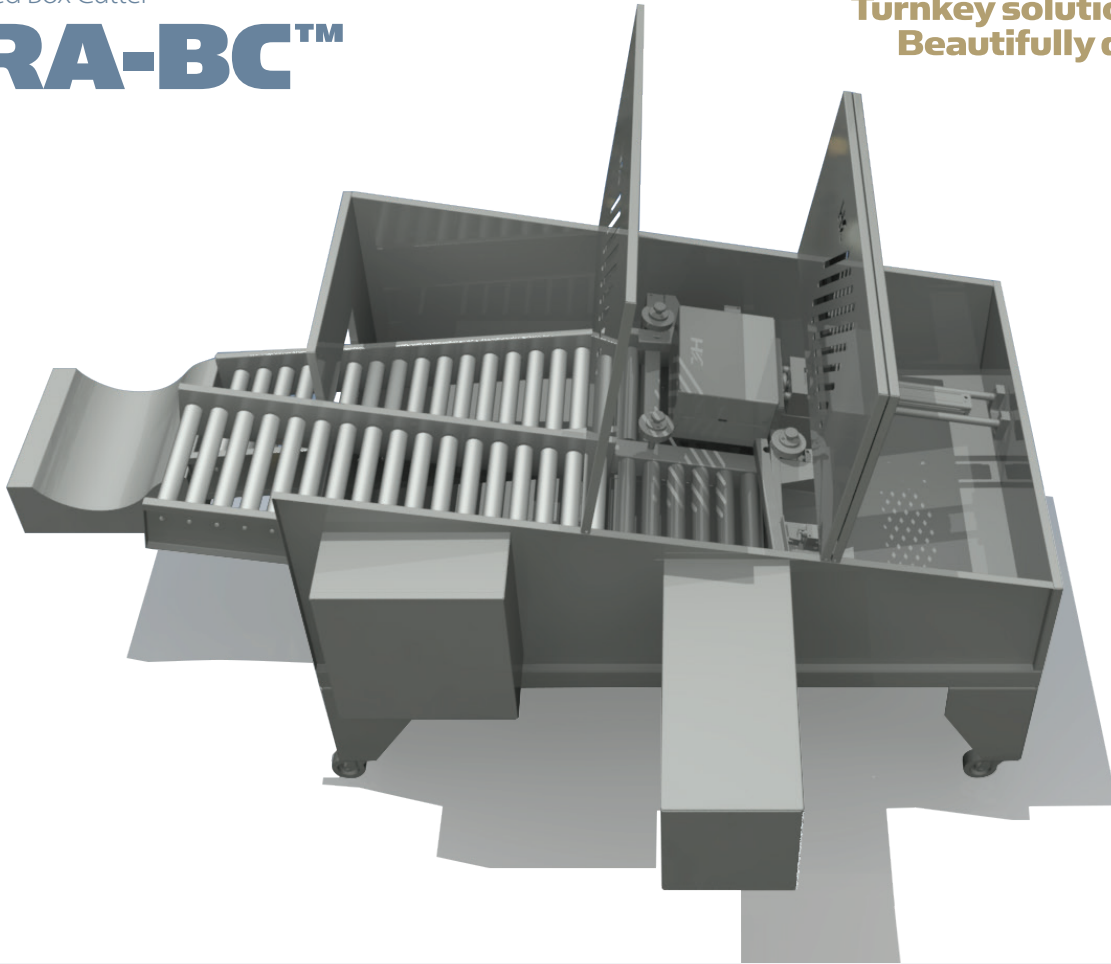

The benefits of automating the carton removal process are:

- » Reduced labour – allows staff to be re-deployed to higher value work
- » Reduced manual handling
- » Elimination of operators' use of knives and the associated risk of injury to staff
- » Best in class footprint

Gravity Fed Box Cutter

GRA-BC™

Turnkey solutions...
Beautifully delivered ➤

Features

- Extremely low energy consumption
- Meets **ANSI/RIA R15.06**, AS 3000, AS 4024 Safety & NFPA 70 (NEC) standards
- Fast easy access for maintenance
- Minimal air consumption 7.4 cfm

Capacity

Weight	Max product weight 50lbs
Rate	up to 8 cartons/min
Carton size	14" x 11" x 7" 356mm x 280mm x 178mm Nominal - can be adapted to suit other carton sizes

Equipment

Footprint	L x W x H 116" x 78" x 50" 2950mm x 1980mm x 1270mm
Conveyors	Gravity roller infeed & outfeed
Box cutting	H&C cutting system
Additional	Optional lift assist and/or vacuum lift

Control

Pneumatic logic	SMC
